

Actions for NSW Freight and Logistics Industry Efficiency Workshop: Meeting the Challenges of the 21st Century

A series of workshops are being held to provide industry, government and other key stakeholders with the opportunity to provide their views on the changes that are needed to boost productivity, growth and sustainability within the freight and logistics sector.

You are invited to attend one of the workshop sessions outlined overleaf to share your views on key regional and statewide challenges and opportunities for freight and logistics in the short and long term. All freight and logistics stakeholders are welcome, including:

- Manufacturers, distributors, retailers and small and medium enterprises;
- Transport and logistics service providers across all modes;
- Commercial property developers and infrastructure asset managers; and
- State and local government officials, and industry associations with responsibilities for planning and infrastructure development.

The best and most sustainable freight supply chains are in everyone's interest. You can make a significant contribution by participating in the workshops.

FALCONSW is funded by the Commonwealth and NSW Governments to encourage dialogue between the freight and logistics industry and government. Its main undertaking for 2009 is to identify the major supply chain challenges in NSW and to develop a shared way forward for industry and government.

The Freight and Logistics Council of NSW (FALCONSW) has appointed PricewaterhouseCoopers (PwC) to develop an action agenda for efficiency improvements in the NSW freight and logistics sector. Hearing your views is a critically important part of this project.
